

Aquadyne © Bead Filtration Systems

by KOI CAMP Aquariology

Manufacturers of Aquadyne Bead Filtration Systems

Greetings,

It is a pleasure for us that you have requested further supporting literature concerning our Aquadyne systems. For years we had sold filters manufactured by others, with varying results in performance. Some ok, and others downright laughable. And we are thankful for that experience. For if we had not been down that tough road, Aquadyne systems would not exist today with its renowned service record. We have gone to great lengths in this literature to inform you completely of all the benefits of our systems, and we hope that you can appreciate the knowledge benefit of this package whether or not you choose to add the ease and convenience of an Aquadyne system to your pond at this time.

By the way, please allow me to introduce myself. I am Greg Crane, the chief executive of an Atlanta based company known as Crane Enterprises Inc. dba: KOI CAMP Aquariology. At Koi Camp, we nationally and internationally manufacture, distribute products, and provide anyone who will seek our assistance with most of the basic necessities that are listed within the text of Koi Health and Disease. In the area of filtration we excel by producing a professional pond filtration system that is not cheap at first appearance, but are expressly designed to far outperform the next best thing on the market. New engineering technology through the highly specialized central diffuser column virtually eliminates internal friction loss and clogging problems associated with other bead filtration systems on the market. Most important, is the fact that an Aquadyne will be the last filter that a pond owner will ever need to buy. It is very rewarding to produce and sell a product that has such a renowned international reputation for filtration excellence. Koi Camp originally patented and produced the Aquadyne systems with the anticipation of selling 20 or 30 units per year, and to date we have been astounded by the 1910+ units that have been sold in less than two years and to date our customer satisfaction is unparalleled by any other bead filter! Even the Pro's say it's too good to be true, and that this is one product that is compact and truly performs, without having to install a filter as large as your car next to your pond.

Our present distribution of products includes the United States, England, Australia, Singapore, British Virgin Islands, Caymen Islands, and many other provinces and countries around the world. So please, digest the information provided here and ask your dealer for assistance if you have further questions.
